Reducing Development Cycles by 10x using Strategic AI
Orchestration with Claude Code, Kilo Code
New Delhi, Delhi, India

Summary

Innovative and results-driven Software Engineer with a proven track record in architecting high-availability cloud infrastructure, backend systems, and AI-driven automation. Currently an Associate Software Engineer at E2E Networks, I specialize in building resilient, distributed systems that power modern cloud solutions.

I distinguish myself by blending deep infrastructure expertise with cutting-edge AI orchestration. By strategically leveraging tools like Claude Code and Kilo Code, I have successfully reduced end-to-end development cycles by 10-fold while maintaining rigorous system reliability. My technical core spans Python, Django, Kubernetes (K8s), and Ansible, with a focus on High Availability (HA) and Disaster Recovery (DR).

Key Technical Impact:

Infrastructure: Architected Multi-Master K8s for K8s-as-a-Service and engineered secure multi-cloud VPC peering.

Performance: Optimized DBaaS APIs and HAProxy configurations, reducing latency by 35% and increasing throughput by 40%.

AI & Automation: Developed LLM-powered pipelines using LangChain and built conversational AI flows with Rasa and OpenAI.

Storage: Implemented automated snapshot shipping to S3-compatible storage using Linstor for stateful application recovery.

Passionate about system design, software quality, and the intersection of DevOps and Artificial Intelligence. I am currently open to challenging opportunities in Software Development, Backend Engineering, and AI/ML roles where I can build transformative, scalable technology.

Let's connect to build the next generation of high-performance engineering!

Experience

E2E Cloud

1 year 3 months

Associate Software Engineer

July 2025 - Present (9 months)

New Delhi, Delhi, India

Architected and managed high-availability microservice backends using Python, Django, and Celery, automated via Ansible for seamless cloud deployments.

Leveraged AI orchestration tools (Claude Code, Kilo Code, and Open Code) to reduce end-to-end development cycles by 10x through strategic prompt engineering.

Implemented Multi-Master Kubernetes (K8s) architecture for K8s-as-a-Service, ensuring multi-node redundancy and robust Disaster Recovery (DR).

Engineered secure multi-cloud VPC peering, establishing encrypted, low-latency communication for high-performance data-streaming platforms.

Developed automated snapshot shipping to S3-compatible storage using Linstor, enabling the rapid restoration of stateful applications and dashboards.

Optimized DBaaS API performance, achieving a 35% reduction in latency through advanced query pipeline tuning and efficient caching serialization.

Resolved 20+ critical production bottlenecks across distributed storage and compute layers, boosting overall platform uptime by 30%.

Associate Software Engineer Intern

January 2025 - June 2025 (6 months)

New Delhi, Delhi, India

Enhanced DBaaS APIs, improving response times by 35% and contributing to performance optimization.

Implemented high availability (HA) for MySQL/MariaDB with automated failover, ensuring system reliability.

Optimized HAProxy configuration, boosting request-handling efficiency by 40% and ensuring high availability.

Resolved 20+ critical bugs across Load Balancer, VMs, and Scalable File Systems, reducing downtime by 30%.

Engages.ai

Software Engineer Intern

May 2024 - November 2024 (7 months)

Singapore

Developed and implemented a URL tracking system that enhanced monitoring and analytics capabilities, driving a 10% increase in client acquisition within six months.

Spearheaded the development of Engages.ai, resulting in a 30% reduction in customer service response time, 20% decrease in lead acquisition costs, and a 25% increase in sales conversions through automated follow-ups.

Engineered scalable and efficient web applications using JavaScript, NestJS, ReactJS, TypeORM, and Docker, achieving a 40% improvement in application performance and a 50% reduction in deployment times.

Google Developer Student Club LNMIIT

Core member

June 2022 - August 2024 (2 years 3 months)

Jaipur, Rajasthan, India

Actively contributed in the AI/ML and Software Development domain, applying skills across multiple projects and initiatives.

Built and deployed "Avataran", an automation script on the college server to wish people on their birthdays, using Python, SMTP, and mailing services.

Gained hands-on experience with Python, TensorFlow, Django, Flask, PyTorch, Pandas, and C, strengthening expertise in software development and data analysis.

Onefinity Labs

Software Engineer Intern

January 2024 - May 2024 (5 months)

Bengaluru, Karnataka, India

Automated assessment creation by designing agent pipelines with LangChain to generate coding and MCQ assessments, reducing manual effort by 50% and enhancing content delivery efficiency.

Optimized data management by collaborating on the design of a scalable database and datastore in Supabase, improving data retrieval speed by 30% and enabling seamless pipeline access to pre-existing content.

BloodConnect Foundation

1 year 6 months

President (Team Jaipur)

February 2023 - December 2023 (11 months)

Jaipur, Rajasthan, India

Led the Jaipur chapter of India's largest youth-led blood donation NGO, managing a team of 30+ volunteers.

Organized awareness drives, blood donation camps, and donor recruitment activities, increasing participation by 40% in under a year.

Directed partnerships with local hospitals and institutions, strengthening the chapter's impact and outreach.

Volunteer Engagement Executive

October 2022 - February 2023 (5 months)

Jaipur, Rajasthan, India

Coordinated and motivated volunteers across multiple initiatives, ensuring active participation and smooth event execution.

Streamlined onboarding and engagement processes, enhancing volunteer retention by 25%.

Volunteer

July 2022 - December 2022 (6 months)

Jaipur, Rajasthan, India

Supported recruitment and coordination of volunteers for blood donation drives.

Assisted in event planning and execution, contributing to the success of grassroots-level donation campaigns.

Education

The LNM Institute of Information Technology

Bachelor of Technology - BTech, Computer Science · (November 2021 - 2025)

St. dominic's School

10+2 , Health and Physical Education/Fitness · (2018 - 2020)

Hartmann College

10, Mathematics and Computer Science · (April 2015 - March 2018)
